

Training and Education Command

Enemy Tactics, Techniques and Procedures (TTP) and Recommendations

Training and Education Command

Attack Small Elements

- Preference for attacking small (2-4 vehicles), lightly armed convoys with small arms and RPG fire.
- Recommendations:
 - When possible, travel in large convoys
 - Always remain alert!

Training and Education Command

Rear of Convoys

- Enemy forces tend to attack the rear of convoys,
 - Especially convoys with a “weak” rear security element (e.g., no crew served weapon).
 - Hostile forces are actively focusing on vehicles at the rear of convoys to keep the potential attack response to a minimum.
- Recommendations:
 - Ensure your convoy has an extremely visible force protection asset. (The more visible your convoy security is, the less likely you are to be attacked.)
 - Ensure you have a strong rear security element; provide a “trail” rear security element (if available) that shadows the convoy by a few hundred meters. This force can more quickly and accurately engage hostile forces that attack our convoys from the rear.

Training and Education Command

Time of Day

- Most attacks are taking place early morning and late evening.
 - From 2100-0300 remains a very dangerous time to be on the road.
 - There has been a recent increase in the amount of daylight attacks.
 - Many units are not returning fire and enemy feels confident they can escape.
- Recommendations:
 - Stay off the MSR's during times of darkness
 - Remain alert no matter what time you are on the MSRs and ASRs.

Unclassified /

Training and Education Command

IEDs

- Increasing use of Improvised Explosive Devices (IEDs) and/or mines in roads.
- Recommendations:
 - Do not attempt to move, or stop for, items in the road, to include:
 - Boxes
 - Bags
 - Debris
 - Animal Carcasses
 - UXO
 - Soda Cans
 - Broke-down vehicles
 - Give wide clearance to any items on the roads.
 - Remember the rules for obstacles - They are being observed. Hostile forces may directly target Coalition forces that stop to investigate or clear IEDS—do not stop near a suspected IED.

Training and Education Command

Be Aware of Overpasses and Crowds

- One of the most prominent methods of attacking convoys has been attacking from overpasses with small arms, RPGs and IEDs.
 - This allows an attacking force good observation and fields of fire, good cover and concealment (often), and quick escape routes.
 - Attackers may use demonstrations or crowded market places as a distraction to mask their movement right before they attack with IEDs or small arms fire.
- Recommendations:
 - Do not to stop under overpasses.
 - Be extremely cautious when approaching overpasses.
 - Be on the lookout for personnel on overpasses observing you; they may be preparing to drop/throw a grenade or IED at your convoy.
 - Recommend vehicles switch lanes as you draw closer or as you go under overpass to position yourself in the opposite lane of the one being targeted.

Training and Education Command

Be Aware of Overpasses and Crowds

(Cont)

- Recommendations: (Continued)
 - Avoid routes where there are built up areas. If a convoy must go through built up area then move out as swiftly and safely as possible.
 - Do not stop at any point, if possible. Maintain a steady speed throughout the convoy of no less than 35mph.
 - Most overpass ambushes are directed at the rear/trail elements of a convoy.
 - Use a "road-guard" concept (similar to conducting PT runs) in which a front gun truck speeds up to and past the overpass, then sits in overwatch with the gun trained on the overpass as the rest of the convoy passes under. The rear gun truck then relieves the front gun truck in overwatch until the convoy is out of small-arms range, then speeds up to resume rear security.
 - Roll windows up in crowded areas and watch for personnel approaching your vehicles.
 - Lead vehicle in each convoy be equipped with binoculars to scan overpasses from a greater distance for potential threats.

Unclassified /

Training and Education Command

Ramming

- Ramming vehicles from behind, or attempting to disrupt, slow or isolate vehicles in a convoy by driving between vehicles in convoy.
 - They may be attempting to slow or stop your convoy to execute an attack.
 - There has recently been an increase in civilians trying to cause vehicles in convoys to swerve or stop, especially in southern Iraq.
- Recommendations:
 - Rear security element must be alert for suspicious activity or peculiar behavior by civilian vehicles driving around your convoy.
 - The current Rules of Engagement allow you to take the appropriate actions to remove the threat. Consider firing warning shots, or shoot to disable the vehicle if the threat persists.

Unclassified /

Training and Education Command

Motorcycles

- Use of motorcycles to attack convoys.
 - Motorcycles allow for quick escape from an attack site.
 - Quick and maneuverable.
- Recommendations:
 - Be alert for motorcycles with driver and passenger.
 - Passengers may be used to attack convoy with grenades, RPGs or small arms.

Training and Education Command

Signal Devices

- Use of flares or gunshots to signal your approach.
- Recommendations:
 - Be cautious when you observe flares; these have been used to signal/warn of approaching convoys/patrols for potential ambushes.
 - Bursts of gunfire have also been used to signal the approach of convoys/patrols.
 - Convoys should limit use service drive (makes them more visible to hostile forces). U.S. military vehicles are the only vehicles using headlights during day; which makes them “stick out” and easier to identify at a greater distance to hostile forces.

Unclassified /

Training and Education Command

Other Signals

- Watch for other signaling measures and signs, particularly in urban areas.
- Recommendations:
 - If you approach a village during hours of darkness, and observe the lights in houses going off, be alert! This may be a form of signaling to hostile forces that your convoy is approaching.
 - If you observe an absence of children in area where previously there were numerous children, stay alert! The locals/parents may have been warned of an impending attack, and the children may have been pulled out of the area by worried parents.

Training and Education Command

Observers

- Use of scouts/recon assets, to include photographing or videotaping of convoys. Recently the enemy has been caught utilizing periscopes to observe coalition activities.
- Recommendations:
 - Be observant of people observing you.
 - If personnel appear to be counting the number of vehicles in your convoy, or seem overly interested in your convoy, stay alert!
 - These personnel may be a scout or recon asset for a potential ambush force farther down the road, and may call/signal your approach to this ambush force.

Unclassified /

Training and Education Command

Beware of Children

- Use of children/teenagers to conduct attacks.
 - There have been several attacks on Coalition forces that have involved adolescents as either attackers or “scouts.”
 - Children have also been given explosive vests to wear then sent to coalition troops.
- Recommendations:
 - Do not assume children are harmless!
 - Be wary of children approaching your vehicles, or observing your convoy from an overpass.
 - Hostile forces could be using/forcing these adolescents to conduct attacks.

Unclassified /

Training and Education Command

Cover and Concealment

- Attacks from access roads, buildings, overpasses or thick brush along MSR/ASRs.
 - The enemy will use the above for cover/concealment when attacking, and access roads allow for a quick escape after attacking a convoy/patrol.
 - Rooftop observation by hostile forces is a common tactic.
 - Hostile forces may warn civilians of impending attacks.
- Recommendations:
 - Be cautious while traveling through or by any of the above locations.
 - In conjunction with other TTP observed (e.g., use of flares/gunfire to signal your approach; during darkness), you may be able to anticipate and avoid an ambush.
 - Convoys should be aware of changes in civilian traffic patterns, cautious of unusually quiet areas, and be alert for local nationals watching/observing you from an unusual location (like a rooftop).

Unclassified /

Training and Education Command

Baiting and Lures

- Feigning injury/leading U.S. forces into an ambush.
 - Recently, hostile forces have attempted to lure Coalition forces into ambushes by feigning injuries (resulting in Coalition force attempting to offer help being ambushed).
 - “Trusted” local nationals have led a patrol to a supposed target, only to have the patrol ambushed. Several vehicle bomb and suicide bomber attacks were made at checkpoints during combat operations in Iraq during March and April.
 - An Iraqi posing as a taxi cab driver feigned a break down and detonated his vehicle when four soldiers approached killing them all.
 - Three Rangers were killed in western Iraq when an SUV drove up to their checkpoint (along with other cars) and then exploded.
 - In another instance, an Iraqi at a checkpoint set off explosives hidden under his clothes wounding a number of Marines.
 - In all cases, deception was used to get close to U.S. forces and increase the effect of the attack.

Unclassified /

Training and Education Command

Baiting and Lures (Cont)

- Recommendations:
 - Be aware of these tactics. Do not lower your guard at any time, and it is not recommended you stop your convoy to offer assistance to “wounded/injured” Iraqis.
 - Recommend all convoys be equipped with tow bars or tow straps for quick recovery operations after an ambush.
 - All vehicles (to include NTVs) be reinforced with sandbags to help defeat the effects of IEDs/mines/RPGs.

Unclassified /

Training and Education Command

Emerging TTPs

- **BROKEN-DOWN VEHICLE:** HUMINT from Taji area: Vehicle on side of road with hood up waits for convoy to pass; once convoy passes, truck pulls out and follows convoy to a designated escape point where it shoots convoy rear vehicle and turns off (escapes). Remain situationally aware; watch for vehicles on side of MSR with hoods up.
- **CAR SEAT IED:** On 30 August, an Iraqi Security Council member living in Baghdad died shortly after he sat on what was probably a pressure detonated IED placed under his car seat; first reporting of a pressure detonated IED placed under a car seat. Never leave vehicles unattended, or park in secure compounds. Visual inspection of vehicle prior to use.
- **TIME DELAY FUSE AS DETONATOR:** IED discovered on 29 July on "Line Road" west of Taji had three artillery shells rigged with a time-delay detonation device; first reporting of use of time-delay detonation devices with IEDs in Iraq. This gives the enemy the advantage of utilizing unmanned standoff attacks, but requires heavy surveillance of targeted area for military convoys and traffic to determine the best times to utilize such devices. Randomly timed convoys and traffic movement will help to counter the effectiveness of time-delayed IEDs.
- **USE OF IED AIMING POINTS:** On 22 August, a convoy on MSR Tampa in Tikrit was attacked with an ED. Investigative team identified a probable aim point in median of MSR; consisted of a mound of dirt with a paint can on top; also found a probable hide site consisting of concrete blocks ~50 m east of MSR; hide site allowed line of sight to the aim point, which lined up with the detonation site. Proper dispersal of vehicles in convoy will minimize damage from IED explosion.

Training and Education Command

Bottom Line

- Situational Awareness
- Be Prepared
- Communications
- Keep Moving
